

PATHWAYS

Clinical Decision Support Tools Drive Superior Care

At OneOncology, technology plays an integral role in enabling evidence-based standardized care, clinical trial prioritization and adherence tracking. OneOncology has invested heavily in clinical decision support tools to drive superior care for patients as well as to inform strategic initiatives with payors around prior authorizations and value-based contracts. Our clinical decision support tool, OneOncology Pathways, is consistent with other national guidelines, reviewed and approved by OneOncology diseases experts representing each of our partner practices, and integrated directly into the EMR, enabling physicians to:

- quickly select evidence-based treatment options without disrupting or adding to workflow,
- avoid burdensome utilization management from payors, and most importantly
- provide the highest quality of care to patients

WHAT OUR PHYSICIANS SAY:

I think [our ability to coordinate expert opinions, provide OneOncology practices with a set of clinical best practices, and help practices implement them is] what sets us apart from other pathways programs; in some cases, you create a PDF or maybe an electronic tool and that's the end of the process. We do other things in...analytics and in identifying patients, particularly for targeted therapeutics. For example, how do we integrate next-generation sequencing to make sure we're finding every patient with a KRAS [G12C] mutation?

We're tightly connected with provider education. When a treatment comes on board or there's a change in a pathway, we'll have a video and handouts or even live programs to make sure everyone knows which patients should receive the therapy and how to best give that therapy. We also work with a product called Flatiron Assist4; Flatiron [Health], the maker of OncoEMR [electronic medical record], is our technology partner. Flatiron has a point-of-care tool for use when you're ordering a regimen and we are working with [Flatiron] to customize it, so that when physicians are ordering it's easy to follow the pathways for their patients.

The practices in OneOncology are focused on optimizing patient care. Philosophically, we're all aligned around having a pathways program—and particularly one like this, where we have a voice in it, rather than, say, an insurer's pathway program, where we wouldn't have a voice.
